Hospital Database Joseph Abdulwahab

Assumptions, (E)ERD, Relations and keys

Assumptions:

- Added an attribute for medicine price for any in-house given medicine which can be referenced in invoice payable.
- Created Relations, shaded in green, for multivariable attributes.

Set of relations:

Employee: (UniqueID, Name, CertificationNum)

Primary key: {UniqueID}

EmployeePhoneNums(EmplD, Phone) Primary key: {EmpID, Phone}

Foreign key: {EmpID references Employee(UniqueID)}

EmployeeAddresses(EmplD, Address) Primary key: {EmpID, Address}

Foreign key: {EmpID references Employee(UniqueID)}

Nurse(NurNum)

Primary key: {NurNum}

Foreign key: {NurNum references Employee(UniqueID)}

Physician(PhyNum, FieldOfExperience)

Primary key: {PhyNum}

Foreign key: {PhyNum references Employee(UniqueID)}

Room(RoomNum, Capacity, Price)

Primary key: {RoomNum}

Patient(PatID, PhysAssigned, RoomAssigned, Name)

Primary key: {PatID}

Foreign key: {PhysAssigned references Physician(PhyNum), RoomAssigned references Room(RoomNum)}

PatientPhoneNums(PID, Phone)

Primary key: {PID, Phone}

Foreign key: {PID references Patient(PatID)}

PatientAddresses(PID, Address)

Primary key: {PID, Address}

Foreign key: {PID references Patient(PatID)}

Instructions(UniqueID, PhysPrescribed, Price, Description, Date ordered)

Primary key: {UniqueID}

Foreign key: {PhysPrescribed references Physician(PhyNum)}

Orders(PhysicianID, PatientID, InstructionID, Date)

Primary key: {PhysicianID, PatientID}

Foreign key: {PhysicianID references Physician(PhyNum), PatientID references Patient(PatID),

InstructionID references Instructions(UniqueID)}

Medication(ProductNum, Dose, Name, Price) Primary key: {ProductNum}

Administers_Medicine(AdminID, NurseID, MedicineID, PatientGiven)

Primary key: {AdminID, NurseID, ProductID, PatientGiven}

Foreign key: {NurseID references Nurse(NurNum),

MedicineID references Medication(ProductNum),

PatientGiven references Patient(PatID)}

Health Record(RecordID, PatientID, Status, Date, Description)

Primary key: {RecordID, PatientID}

Foreign key: {PatientID references Patient(PatID)}

Diseases(PID, Disease)

Primary key: {PID, Disease}
Foreign key: {PID references Health_Record(PatientID)}

Invoice_Payable(InvoiceNum, PatientTreated, RoomOccupied, InstructionsPerformed, MedicineGiven, Date, Amount, Fee)

Primary key: {InvoiceNum}

Foreign key: {PatientTreated references Patient(PatID),

RoomOccupied references Room(RoomNum),

InstructionsPerformed references Instructions(UniqueID), MedicineGiven references Administers_Medicine(AdminID) }

Nurse_Executes_Instructions(NurseID, InstructionID, PatientID, Date, Status)

Primary key: {NurseID, InstructionID, PatientID} Foreign key: {NurseID references Nurse(NurNum), InstructionID references Instructions(UniqueID),

PatientID references Patient(PatID)}

Physician_Moniors(PhysicianID, PatientID, DurationInHours) Primary key: {PhysicianID, PatientID}

Foreign key: {PhysicianID references Physician(PhyNum), PatientID references Patient(PatID)}

3 Triggers

1) Insert a patient health record once the patient is admitted to the hospital today

```
DROP TRIGGER IF EXISTS insert_patient_record;
         DELIMITER //
108
109 •
        CREATE TRIGGER insert_patient_record
         AFTER INSERT ON patient
110
111 ⊝ FOR EACH ROW BEGIN
112
             INSERT INTO Health_Record (PatientID, Status, Date, description)
             VALUES (NEW.PatID, 'Admitted', Now(), 'New patient record created');
113
114
         DELIMITER;
115
116 •
         select * from Health_Record; -- do an insert statement after the trigger to see the effects.
117
                                        -- Ideally, run schema, trigger, then insert data, then finally view the relation.
118
Export: Wrap Cell Content: IA

           678564320
                            2024-04-27
                    Admitted
                                      New patient record created
          768493756 Admitted 2024-04-27 New patient record created
           820483754 Admitted
                            2024-04-27 New patient record created
        340384573 Admitted 2024-04-27 New patient record created
           204387303 Admitted 2024-04-27 New patient record created
```

2) After records are inserted in the orders relation today, update instructions to have today's date_ordered

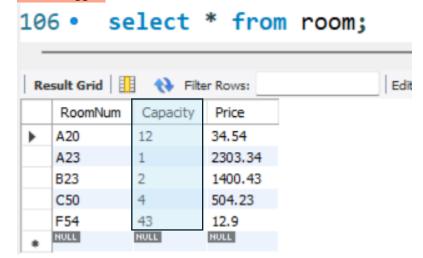

After trigger:

```
DROP TRIGGER IF EXISTS Modify_date;
120 •
121
        DELIMITER //
122 • CREATE TRIGGER Modify_date
        AFTER INSERT ON Orders
123
124   FOR EACH ROW BEGIN
125
             Update Instructions set Date_ordered = NOW()
126
             Where Instructions.UniqueID = NEW.InstructionID; -- new InstructionID b/c this is after creating order records. cannot do Orders.InstructionID
127
         END; //
         DELIMITER;
128
129 •
        select * from Instructions;

```

3) Update the room capacity by -1 each time a patient is admitted to the room.

Before trigger:

After trigger:

```
DROP TRIGGER IF EXISTS updateRoomCapacity;
133
        DELIMITER //
134 •
        CREATE TRIGGER assign_nurse_to_instruction
        AFTER INSERT ON Patient
135
        FOR EACH ROW
136

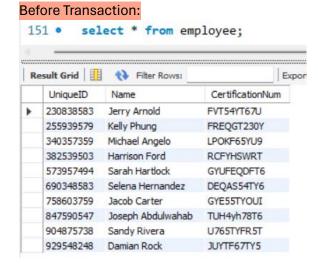

→ BEGIN

137
            UPDATE Room set Capacity = Capacity - 1
138
139
            where New.RoomAssigned = RoomNum;
140
        END;//
        DELIMITER;
141
142 •
        select * from room;
                                     Export: Wrap Cell Co
